

SSC Class 11

SSC DVD 5 Counter Time: 00:45 – 02:00

Questions and Answers

- 1. The anchoring of the BeaST machine in our planetary grids began with the creation of an unnatural "patrol station" that included the artificial orbiting of Nibiru and Wormwood in our solar system and began the harnessing of the frequencies here. This occurred during the Luciferian Rebellion 25,500 BC. What was this "patrol system" designed to do?**
 - At a specific point in time, when the Solar Cross alignment occurred in the planetary relationships AND during a Stellar Activation Cycle, this machine was designed to accelerate the artificial Nibiru/Wormwood orbit spin using a certain type of pulse bouncing. When the full BST machine was activated, after the BST Merkaba reversal was created and the Solar Cross alignment happened, the "patrol system" was intended to take the 55 BeaST Galactic Merkaba vehicle and Planetary Merkaba vehicle and literally knock these Merkaba vehicles into opposite rotation, because they would have been spiralling counter-clockwise up toward the Wesadrak Matrix. What the Annunaki [Wesadek Matrix] wanted to do was rip a hole through the Wesadrak Black Hole, reverse their template, make it all come back down clockwise, and take the whole thing out, including the Wesadrak Black Hole and the Veca, right down over into the Wesadek Black Hole. Quite an ingenious scheme. They worked very hard for many years to do this; it was their "grand hurrah" in their "raid the intergalactic spectrum" job.
- 2. The Eieyani Massacre occurred in 22,326 B.C. The Eieyani and Indigo races were on planet to carry out a mission but were betrayed and destroyed. What was their mission? Was their mission successful? Who betrayed them? What was the biggest betrayal of this incident?**
 - Their mission was to prevent the activation of the BeaST machine. They did this by: 1) closing the Star Gates and 2) stopping the blending of the top spirals of the Wormhole Merkaba and natural Merkaba. Their mission was successful. They were betrayed by certain groups, but in particular a being called Thoth. Thoth was part of the Emerald Covenant bio-evolution regeneration agreements. He had been put in charge of many races from Nibiru and other Annunaki races that wanted to regenerate their template, and he had been trusted. He defected, became an infiltrator, and stole knowledge from Cloister-Dora-Teura (CDT) Plate-11, with which he had been entrusted. He had been put in charge of large races of hybrids on this planet; they became hybrids because they were allowed to come in and splice into the human gene and the Indigo gene template so they would be able to regenerate at least the Density-1 level of the Kristos code down here, so they

could get out of Density-1, go to Tara, and then do the same thing there so they could progressively regenerate. The biggest betrayal was against Thoth's own people, because he took out of their hands the ability to stay on the Kristos path, which had been their original choice.

- 3. The Guardians prevented activation of the BeaST machine at the time of the Eieyani Massacre in 22,326 BC, which left a *static frequency field* that blocked the top spirals of the BeaST Wormhole Merkaba and natural Merkaba from spinning. In 13,400 BC the star Polaris (Gaia) was attacked, causing damage to our grids and shutting down the *static frequency field*. This meant that the spirals would begin to blend prematurely and interfere with the plans of the United Intruder Resistance (UIR). The BeaST machine needed to interface with the Gates of the Phantom Matrix, which were blocked due to the "wall in time," and they also needed to wait for the Stellar Activation Cycle (SAC), when the planetary Star Gates would open. So they set up a *frequency fence net to keep the spirals in stasis* until the next SAC. What this did was create a really strange thing—in the stopping of the spin it created reversal of the planetary Monad. The planetary Monad went into reverse spin, but at the same time it created a frequency static field between the Dimension-1 [D-1] and Dimension-2 [D-2] and Dimension-3 [D-3] of each of the Merkaba levels. It reversed the D-3 Merkaba. It reversed the Monad and the D-1 Merkaba. What it didn't reverse was the D-2 Merkaba. It held the D-2 Merkaba in its natural counter-clockwise spin. The D-2 Merkaba is connected to the D-2 Reality Field, which is what we perceive as solid right now. The only thing left moving was the bottom spiral, which was left at 7 and 7/9ths counter-clockwise spin, and that allowed the D-2 Shield to continue to spin, but spinning at 7 and 7/9ths. That created a 47-degree diameter wobble that the Earth goes through almost every 26,000 years. What effect did this have on our planet?**

- The change of seasons in nature on the planet are caused by this wobble. The seasons are an artificial construct. The 7 and 7/9ths spin became what is known as the Earth's 7.8 Hertz core pulsation.

- 4. What were the Pleiadian-Sirian agreements of 1992 about? When and why did they fail?**

- The Annunaki groups, including Thoth and some of the Archangel Michael crew, agreed to rejoin the Emerald Covenant and participate in co-evolution. This was called the Pleiadian-Sirian agreements. These groups had been in competition with the Omicron-Draconian races for the grids, but when the Zeta joined the Dracs, the Annunaki realized they would lose and so decided to align with the Guardians. The Guardians agreed to accept the Annunaki back into the Emerald Covenant because it would open up a higher vision of healing for these races. The hope was that the Dracs would leave this system, realizing they were no match against the Guardians.
- The agreement failed on September 12, 2000 when the Annunaki were offered what they considered a better deal and defected from the Emerald Covenant. The Annunaki had originally demanded, as part of the agreement, to 50% of the grids,

an offer that was rejected by the Guardians. Per Ash: "*This planet did not belong to them....they weren't even originally coded to these grids. They couldn't even run a Star Gate if it hadn't been that we were nice enough to let them hybridize with us so they could heal their DNA template. That gave them partial access to the Star Gates because they picked up our codes, because human and Indigo codes are built on the exact same mathematics as the planetary Star Gates they were on.*" The Annunaki couldn't look after the grids or the Star Gates because of the state of their DNA, and were asked to work with their races and the Guardians over a period of time to get their DNA straightened out. They didn't accept that request because they were raised on the imprint that they think they're better than everybody else; that's why they should be masters of the universe and not anyone else.

- The Annunaki joined the UIR with the Andromie-Necromitons, Michael Matrix people, Thoth groups, and some of the Drac groups to take over the Templar and divide up control of it between themselves.

5. What triggered Hetharo and Hethalon in 2003?

- Between March and July 2002 the UIR initiated the first activations of the BeaST machine. Once the BeaST is started, it can't be stopped. This began a process of Merkabic chaos for the planet that would definitely mean the Blue Fire Sword Initiation [refer Vocabulary section] would take place and this would result in the creation of the 55 BeaST Merkaba. The Omicron Dracs and the people allied with their agenda activated their Spear of Destiny [refer Vocabulary section] grids in November 2002, and at that point Earth went on Level-6 Evac. Evac doesn't mean everybody is taken off the planet to safety; it means preserving the grids of the planet and solar system under Frequency Fence buffer by linking them to the Ecka. So it's like the planet and the solar system are getting evac'd. If not, everything would be a lot more unstable-looking. If Earth is shifting with the Solar plane and with the Galactic plane during evac, that will prevent pole shift and other Earth changes, so it's much more peaceful.
- Level-6 Evac triggered Hetharo and Hethalon.
- The Kristos Seed Atom was so distorted at this point that it was assisting in Metatronic reversal. The Shield Template and most of the Monad on the Planetary level had been reversed. Hetharo was triggered so that the Kristos Seed atom could be split and reset to prevent full and complete Monadic reversal. This reset of the Kristos Seed Atom occurred on the Universal, Galactic, Solar and Planetary levels, affecting all beings on Earth and their Kathara Grids.

6. During Stage A of Hetharo, the Kristic Seed Atom is split so it can be reset. The Ecka Gates open after a whole chain of Gates all the way up to the Eckasha open, allowing the central Flame to activate all the way up as a big Pillar arc of energy that arcs down through the Universal Gates, into our system and beyond, and then through our Galactic grids into the Planetary grids, shattering the Seed Atom. What is this central Flame of arcing energy called?

- The Amoraea Flame.

7. **Stage B of Hetharo is called the Tri-Veca fold. Describe the Stage B process.**
- During Stage B of Hetharo the planetary *electrical* Merkaba turns into a hot dog-shaped Trion Field. The top seal to Parallel-14 releases and opens and the outside edges of the Merkaba rotate in and go to the vertical, forming a tube, squishing the Trion Field. The circular umbrella shape of the electrical field squeezes up, squashes into a hot dog shaped Trion Light Field. It's called a "collapse," but it doesn't fall apart; it changes form. At the same time the same thing happens over in the Parallel system, which gives the configuration of the two electrical Merkabas in the form of two hot dog-shaped Trion Fields crossing through each other at 90 degrees. At this time the magnetic bottom spirals are still in their normal shape because their seals are still closed, but the *electricals* turn into two hot dog shapes crossing each other. When the seals release, the Gates that are usually further out in the Kathara Grid formation all start to move together. Where usually Gate 10 is out to the right and 9 to the left, and 4 is to the right and 3 to the left, they all come together and form Tri-Veca shapes. The Meahje Fields are still in the center.
8. **During Stage 3 (C) of Hetharo in Paxos, an electrical Master Stand called the Veca Mahadra Father Master Stand was performed. The Veca Mahadra Father Master Stand creates certain configurations in the Merkaba Field, allowing a large umbrella-shaped Merkaba formation to manifest within the Planetary Merkaba Field. At the same time, the electrical Flame Body began to activate in the grids and the electrical Trion hot dog-shaped fields depolarized, which allowed the central fields of their Radial Bodies of part of the electrical Parallel and Particum universe to merge with each other, opening up the frequency tubes that allow the Golden Fleece Frequency Field to begin circulating through the planetary and galactic grids, down through the Arc of the Covenant Gates. All this allows the Heliotalic frequencies to run directly from the Ecka. What is the significance of the new frequencies of the Flame Body, Golden Fleece and Heliotalics?**
- This allowed for a whole new set of options. It meant that you didn't have to be able to reach Level-6 Flame Body activation on your own. Now people could pick up the Golden Fleece Host Frequencies, to be able to go into the protection of the Planetary electrical Merkaba Field. It meant that you could run Heliotalic frequencies in your body to prevent Metatronic reversal. Even if you had already been affected by Metatronic reversal, the Heliotalics would stop full Metatronic reversal. When the natural life span of your body was complete those parts of you that were not reversed could escape and ride the currents of the Heliotalics and Golden Fleece out of this system.
 - Because the Heliotalic frequencies were anchored, 1/3rd of the grids were safe from Metatronic reversal. The Heliotalics actually assisted the Metatronic groups in activating their monster Merkaba by providing frequency subsidy. If the Heliotalics didn't allow this process to happen, the Metatronic Merkaba and our Flame Body would rip each other apart. A Red Pulse would be sent down into their Black Hole systems, which would rip apart everything it touched frequency-wise. It would be like infrasound but even more intense. It would shatter the

templates. By the time Hetharo occurred, the Metaronic groups were not trying to stop the Kristic races from doing their work because they needed the Heliotalic frequencies being brought in.

9. What does the Second Coming of the Krist refer to, and when did it occur?

- During Hetharo on May 28, 2003 at 12:12 am, the 8 outer electrical cells of the Kristos Seed Atom were reset. This was the Second Coming of the Krist. The Hethalon magnetic activation was the Second Coming of the Khrystallah, which was the seven inner magnetic cells.

10. What happened on the Metatronic side during Hetharo?

- Two-thirds of the planetary grids were going through their Metatronized Merkaba activations. Remember that only 1/3 was anchoring the Kristos.
- The top spiral stopped spinning, and the Gates opened to Phantom. The top spiral reverses so it has a negative charge, the same as the bottom spiral. The top and bottom negatively charged spirals push each other away, break the Kathara Grid, the spirals invert, tip upside down, shift 22.5 degrees and then progressively make their way over to the 45-degree slant. They come back together with a totally wacky Kathara Grid numbering system. They force the templates of Gate 5 and Gate 8 together in the center to form an artificial 13-pulse which is called the 13-reversed anti-Kristic Seed Atom. This can run the D-13 artificial Blue Fire Sword current.
- Now, when the Planetary and Parallel Merkaba axes shift over to 45 degrees at the Kathara Grid 9-4 axis, it forms the Planetary Solar Cross vortices. Their central vertical columns form the **Staffs** on the 9-4 axis, and their **Rods** on the 3-10 axis. The Planetary and Parallel reversed Merkaba 3-10 Rods join at the 10-10 Gate and form a big long Rod. Where these two Merkabas join at the 10-10 Gate, a smaller vortex opens up. They have used the 10-10 Gate to take the shield from Arc Gate 5 and Arc Gate 8 and force-blend them together, and that's the point where they anchor the anti-Kristos Seed Atom during Hethalon.
- Then the Planetary and Parallel Merkabas began spinning in reverse with their bottom and top spirals spinning in the same direction. They were same-spin spiral sets. The Planetary Merkaba was spinning at 34 counter-clockwise and the Parallel Merkaba was spinning at 21 clockwise. They didn't have a top and a bottom that go in opposite directions. The counter-clockwise spinning Planetary Merkaba sucks energy in, and the clockwise Parallel Merkaba throws energy out. What is literally being built is something like an electrical capacitor. You have a big 34 counter-clockwise vortex on one side and a 21 clockwise vortex on the other side. These vortices progressively spin the shields that are connected to the Metatronic implant, which are 2/3rds of the shields, with the objective of eventually forcing these shields together to meet in the middle when they get to their full spin speed. That is a configuration, in the Planetary, Galactic, and Universal Metatronic Merkaba Fields, in which the Merkaba axes tilted—they were same-spin spiral sets, they were no longer the in-breath and out-breath of God in a normal way. This Solar Cross alignment is intended to create a Grand Cross alignment in which the vortex in the middle at the 10-10 Gate fully opens,

and when that opens it allows the Planetary Reversed Merkaba to be plugged directly into the same configuration on the solar system level.

11. What effect did the Metatronic Merkaba activations have on people on the planet?

- The Shadow part of your own shields and grids went into Merkaba reversal. That's the separation with your Shadow Self, the part of yourself that had reversed coding that was doing its Astral travel down in the Phantom Matrix. There actually was a Golden Fleece buffer field in between your Shadow Self and the electrical part of you in the Eckasha-shaped teardrops of the eternal Flame Body. So during the Hetharo period our Shadows went into Metatronic Merkaba reversal. Because Phantom Matrix went completely Metatronic, so did our own Shadow parts—which means their Kathara Grids are mutated now and you can't bring them back. Most of us won't miss the amount of energy that went. You might have little flashbacks here and there—sometimes it's just like bubbles of cognition, like a little part of you somewhere that realized it missed something. It feels kind of funny, and it's not sure why, but doesn't worry about it too much. We have enough frequency now because of the Heliotalics that whatever thrust in our shield that we lost, by losing whatever amount of Shadow, we can now replace. It will be subsidized by the Heliotalics, so we can still activate our Merkabas and our Flame Bodies.

12. During Hethalon, August 12, 2003, the Metatronic side was planning on activating the 55 BeaST machine on the Planetary Solar Level and then plugging it into the Galactic Level to create the big 55 BeaST. This process opens a Black Hole and creates what is known as the Fibonacci (Metatronic) spiral. Describe this process.

- On August 12, 2003 the 34 CCW Planetary reversed Merkaba pyramidal spiral/vortex and the 21 CW Parallel reversed Merkaba pyramidal spiral/vortex hit their peak spin speed, which means they would pull into one center alignment. These two Merkaba Fields came together in the center at the 10-10 Gate, where the D-13 anti-Kristos Seed Atom resides. This anti-Kristos Seed Atom forms a little Merkaba in the center. You have 3 Merkaba Fields. When the reversed Planetary and Parallel Merkabas come together they pull through each other and their spirals/vortices end up as a capsule around the set of three Merkabas. So you have a surrounding capsule. Once this configuration takes place, a black hole opens within the capsule. That creates a radiation barrier, or a radiation bubble, around the space that opens up as the black hole, and the disc/shield becomes an entrapment field that begins to eat frequency. It begins to pull the grids in, and every time it pulls in some it rotates once and then traps the energy in that size of the rotation. Once it entraps it, the shield starts to pull that frequency in. The shield itself begins to accrete; it's an accretion disc/shield. Then it begins to pull in frequency and feed it into the center smaller Merkaba, where it expands this center Merkaba out. There's a very specific way that this takes place: You start out with a 34 and 21 capsule, and once they're together, the 34 counter-clockwise overrides the 21 clockwise one and eats it. So 34 plus 21 becomes the 55—that's

when the disc/shield pops out and the black hole inside opens up. Then you have two vortices that had gone into a same-spin spiral set as well as a 34 vortex, and the 55 eats the 34 and becomes an 89, and it begins this process of generating a disc/shield that entraps energy in the Unified Field. And then it eats the one that it made before, and progressively grows, and it becomes a spiral here that is called the Fibonacci spiral, but it's really the Metatronic spiral, which progressively eats holes in whatever part of the fabric of creation it gets stuck in.

Vocabulary

1. Hetharo/Hethalon:

Hetharo and Hethalon go together. They reset the original Creation Imprint, they reset the 15-cell Kristiac Seed Atom on a Universal, Galactic and Planetary level, and affect all beings on the planet. This process began with Hetharo May 27–28, 2003 when the 8 outer electrical cells anchored. Hethalon occurred on August 12, 2003, when the inner magnetic cells anchored.

2. HE-est-a:

The siesta (rest) period between Hetharo (electrical peak) and Hethalon (magnetic peak).

3. United Intruder Resistance (UIR):

A group of races who have forgotten they are individual expressions of Source and desire to control and have dominion over other life forms and take over the creation process. (Reference: www.azuritepress.com—Frequently Asked Questions.)

4. Heliotalic (also spelled “Heliotalic”) frequency:

Frequencies that run down through the Ecka from up higher. They are pale silver pastel, almost like metallic light frequency. They are liquid light water levels from up higher, and they look and feel like water except they're not wet. The Heliotalic awakening began on May 28, 2003 at 12:12 am until dawn at the completion of Hetharo, at which time the process of HE-est-a began,

5. Blue Fire Sword initiation:

The Blue Fire Sword is the frequency transmission of Dimension-13 reversed current (false artificial light Dimension-7 plus Dimension-6 reversed current). It is used to run the Black Hole BeaST machine. Earth's Blue Fire Sword initiation took place on May 27, 2003 at the same time as Hetharo. This D-13 reversed current was intended to create what's known as the 55 BeaST Merkaba.

Blue Fire Sword initiations are performed on individuals to cause their Merkabas to become Metatronized. Blue Fire Sword initiations were performed by Thoth in Atlantis and continue in the New Age movement. People with fully Metatronized Merkabas “on planet” create an anchoring field for the reversed currents to assist in activating the BeaST machine.

6. Spear of Destiny:

Grid codes controlled by the Omicron Draconian and allied groups meant to reverse the Flaming Blue Sword cross (part of the BeaST machine), turn it upside down and make the BeaST Merkaba (once it came into activation) go in the opposite direction. The intention was to be able to steal everything, like the Veca, and drag the competing groups into the competing Black Hole system. This was a combative initiative.

Multiple Choice

- 1. During the time of the Eieyani Massacre, 22,326 BC, the BeaST machine was prevented from activating; the frequencies of a particular code were run on the Galactic Level, which prevented blending of the top spirals of the Wormhole Merkaba and natural Merkaba. The code created a Frequency Field that created a buffer between those two top spirals. What is this code called?**
 - (a) Eckasha.
 - (b) Tri-veca.
 - (c) Mahadra Adhrana.
 - (d) Reionayana.
- 2. There were severe changes in the Earth grids in 2003 when Hetharo/Hethalon reset the Kristiac Seed Atom. This was unprecedented in history on Earth. Earth wasn't even here the last time a universal Hetharo happened in this Time Matrix. There would have been earthquakes and major cataclysms except for the fact that the Arc Gates opened and generated what type of buffer field?**
 - (a) Particle Conversion.
 - (b) Golden Fleece.
 - (c) Maharic.
 - (d) Silver wave.
- 3. Due to the activations of the BeaST Black Hole machine, the Metatronic side controlled how much of the grids?**
 - (a) 1/4
 - (b) 1/3
 - (c) 1/2
 - (d) 2/3
- 4. The anchoring of the BeaST machine in our planetary grids began with the creation of an unnatural "patrol station" that included the artificial orbiting of Nibiru and Wormwood in our solar system and began the harnessing of the frequencies here. This occurred during the Luciferian Rebellion in 25,500 BC. Which race was responsible for creating this "patrol system?"**
 - (a) Annunaki.

- (b) Eieyani.
- (c) Draconian.
- (d) Andromie Necromitons.

- 5. Following on from the previous question, where did this "patrol station" physically anchor on Earth?**
- (a) Seattle.
 - (b) Paxos.
 - (c) Stonehenge.
 - (d) Andorra.
- 6. During Hethalon 2003, the Metatronic side anchored the anti-Kristos Seed Atom, which interfaces through Gate 10 on the planetary grids. But where is the actual physical location on the planet?**
- (a) Seattle.
 - (b) Paxos.
 - (c) Stonehenge.
 - (d) Andorra.
- 7. The 55 BeaST machine could not activate during Hetharo. What was the Metatronic side waiting for before it could activate during Hethalon?**
- (a) Planetary & parallel Solar Cross alignment of 9-4 & 3-10.
 - (b) Anchoring of the D-13 anti-Kristos Seed Atom.
 - (c) Earth's Blue Fire Sword initiation.
 - (d) Dawning of Aquarius.

Multiple Choice Answers:

1. C, 2. B, 3. D, 4. A, 5. C, 6. D, 7. A.

The dynamics of the emerging MCEO materials involve the reality that the detailed understanding of major topics is under continuous development; therefore, the contents, and level of detail herein, are as advanced as possible UP TO the date of the workshop recording.
